

# Yu-Gi-Oh! Series 10 Card Template

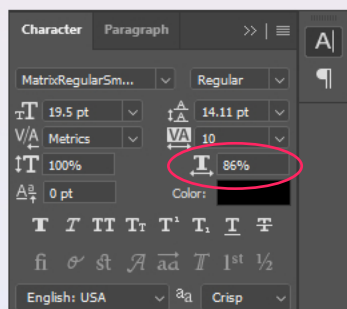

**\*Guide\***

Thanks for downloading.

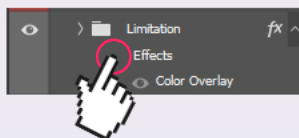

\*Before anything else, install all of the fonts in the fonts' folder, even if already installed.\*

Here is the layer Structure of the PSD file. As you can see everything is pretty much clear. Just a few notes that you should know:

~ Use this Mod to fit title text. (Max value = 100%)

~ Enable the white color overlay effect for XYZ monsters.

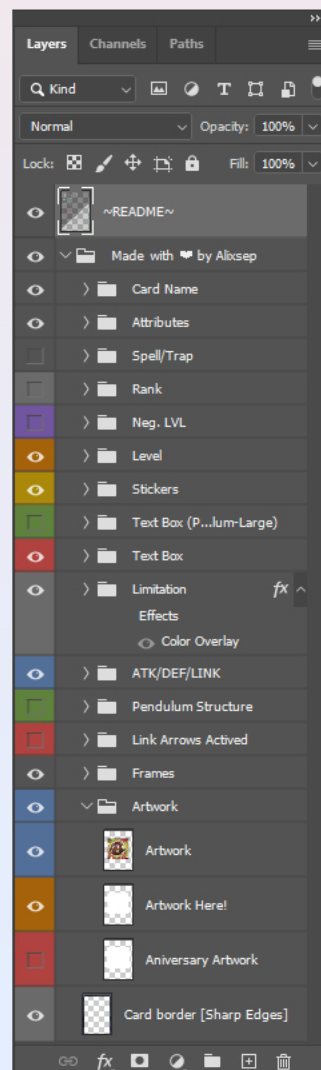

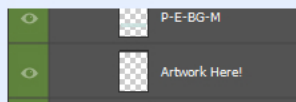

~ The Type Text editing is a lil bit tricky, because the font sizes are different:

When you wanna edit the types, make sure you Hold Shift because you must type in capital.

Let's say you wanna Change "Fiend" to "Beast". First Select the "F" and press Shift + b to write a capital "B". then select "iend" and hold shift and type "east" to write capital "EAST". Alternatively, you could have enabled Caps lock and don't worry about the shift key. Make sure you don't delete the spaces before and after the slash in types.

~ Put the artwork layer right above the "Artwork Here!" layers depending on the card type.

If you wanna support me, you can check out my songs!!!  
I make hard trap music, I do coding too... LOL 🤔  
Yep, I know it seems pretty irrelevant but I actually do them!
